Quality Control Technician Internship
Willis Construction, San Juan Bautista, CA

JOB DESCRIPTION
The Quality Control Technician Intern is responsible for performing routine tests as required on raw materials, and concrete in accordance with ACI specifications, helping with mix designs and creating custom samples for our customers. You will be trained how to read and understand our shop drawings, and will learn how to perform pre and post cast inspections of our products.

QUALIFICATIONS
- ACI Level I Certification
- Ability to read and understand blueprints
- Must be hard working and self-motivated
- Ability to multi-task and handle a fast-paced environment
- Organizational skills and attention to detail are critical to the position

PHYSICAL REQUIREMENTS
- Must be able to climb, bend, push wheelbarrows of concrete, and lift up to 40 lbs. several times daily.
- Must be able to work outdoors in varying weather conditions.

ABOUT US
Willis Construction has become a leader in the Architectural Precast industry. Our success, like many large companies, comes from the dedication and hard work of many. The time we spend working to provide for ourselves and our families is an important part of each of our lives. The choice to provide your talents for any given company should be rewarded. Willis Construction is an Employee Owned company that truly rewards hard working dedicated employees. Our success has come from the innovation and pride that many of our current and past employees have provided over the years. Our continued success depends on those same principles.
