

How Instructors Can Assure A Successful Experience at the SimCenter:

- ☑ Students should be provided guidelines for working with the manikins
 - We recommend a tour of the SimCenter and the Manikin
 - All manikins should be treated with respect, as you would your patients, to avoid damage.
- ☑ Instructors should determine the simulation objectives, appropriate time period and equipment needed to complete the scenario.
- ☑ Reserve or request time by filling out the Reservation Request Form.
 - Be sure to schedule time to practice your session before you bring students to the SimCenter
 - Be aware of priority scheduling policies
- ☑ Notify the Simulation Technician of all equipment requests and special features that your case scenario requires.
- ☑ If you need assistance, determine if the technician is available to help. The SimTech is only available for 28 hours per week.
- ☑ Be aware of Student Capacity guidelines. We recommend a ration of 1 instructor for every 10 students. The SimCenter cannot accommodate more than 20 students at one time.
- ☑ How many students will participate in the scenario? How will all students play an active role?
- ☑ If students don't meet expectations will they be able to remediate? Students should be aware of expected competencies and know remediation procedures.
- ☑ Plan enough time for debriefing. Instructors should plan a debriefing that lasts 2-3 times the length of the case simulation.
- ☑ Have a plan for debriefing students. Students consistently report that the debriefing is the most important part of the educational experience at the SimCenter.
- ☑ Provide opportunity for student evaluation.
- ☑ Report any equipment problems so the Simulation Center staff can quickly remediate these problems.
