CHICO STATE REGENERATIVE AGRICULTURE INITIATIVE

SEMINAR SERIES

IN PARTNERSHIP WITH THE INSTITUTE FOR SUSTAINABLE DEVELOPMENT PRESENTS

DR. RICHARD TEAGUE
ASSOCIATE RESIDENT DIRECTOR AND PROFESSOR, TEXAS A&M UNIVERSITY
“MANAGING GRAZING TO REGENERATE SOIL HEALTH AND FARM LIVELIHOODS”

Dr. Teague utilizes a systems approach to develop land and livestock management practices that sustain natural rangeland resources and the well-being of the people depending on the land.

This talk will highlight research that provides insight into the extent that grazing strategies influence key ecosystem services, the economic viability of working ranches that contribute to the retention of open space and rural community health in the Southern Plains of the USA, the extent that different grazing management strategies can be used by livestock producers to mitigate and adapt to alternative climate scenarios, and the long term economic consequences of using alternative grazing management strategies to achieve rangeland restoration and production goals.

Nov 9th 4-6pm
