Technology and Learning Program: Setting Point Values for Questions

Introduction

Turning Point by default assigns a value of 100 points to each correct answer. This tutorial demonstrates how to set your own point values for your questions. This is important to do before you export your student scores to the Vista grade book.

Setting Point Values for Questions

A: Setup a Point Value for All Questions

First select the Tools menu from the TurningPoint Toolbar and then select Settings.

In the Settings tab, select Presentation in the left panel of the window.
Then scroll to the **Misc** in the larger right panel of the window.

<table>
<thead>
<tr>
<th>Misc</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Add-in always loaded</td>
<td>False</td>
</tr>
<tr>
<td>Correct Point Value</td>
<td>100</td>
</tr>
<tr>
<td>Incorrect Point Value</td>
<td>0</td>
</tr>
</tbody>
</table>

Select the number associated with the **Correct Point Value** (by default it’s 100) with your mouse. You can then delete the number with your keyboard and enter a new value.

You may also add a new number for an **Incorrect Point Value** (good for giving partial credit for an answer).

Finally, select **Apply All** and then **Done**.

---

**B: Set Point Values for Specific Questions**

First select the **Tools** menu from the TurningPoint toolbar and then select **Settings**.
In the **Settings** tab, select the **title of the slide** in the left panel of the window which contains the question you want to set a point value for.

Then look to the right panel of the window for the **Misc** section.
Select the number associated with the Correct Point Value (by default it's 100) with your mouse. You can then delete the number with your keyboard and enter a new value.

You may also add a new number for an Incorrect Point Value (good for giving partial credit for an answer).

Remember to select Done when your finished.
