- Teeth grinding
- Increased heart rate; panic attacks
- Muscle spasms/seizures
- Dehydration
- Exhaustion
- Lapses in memory
- Insomnia
- Acute kidney failure, liver damage
- Stroke, coma, permanent brain damage

**And the #1 reported  
“Rape Drug” is . . .**

# Alcohol!!!!

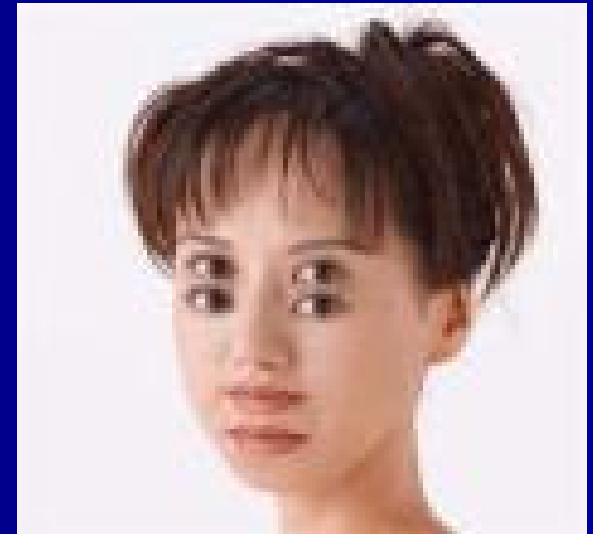

# Huh???

- **90%** of all campus rapes occur when alcohol has been used by either the victim or the assailant.
- As many as **70%** of college students admit to having engaged in sexual activity primarily as a result of being drunk, or to having sex with someone they wouldn't have had sex with if they had been sober.

# Synergism

- To make matters worse:
- $1+1 \neq 2$
- $1+1 = 6, 8, 2000\dots$
- The sum of the parts does not equal the whole!
- The negative effect on the body increases exponentially when rape drugs are combined with alcohol.

# What can you do????

- Listen for the “street names” of drugs.
- Don't leave your drink unattended.
- Don't accept “open” drinks from strangers.
- If your drink looks funny, smells funny, or tastes funny → throw it away!
- Call 9-1-1 immediately if you (or a friend) begin to feel or act very intoxicated after only consuming a small amount of alcohol.
- Don't assume you (or your friend) will just “sleep it off”.
