Injury and Illness Prevention Program (IIPP) Training

Training for employees in general safe work practices, as well as specific instruction with respect to hazards unique to each employee's job assignment, is the single most effective means for reducing injuries and illnesses in the workplace. To support CSE leaders in tracking this critical training need, CSE HR will begin assigning IIPP training to all CSE employees in the CSU Learn learning management system. In alignment with campus, employees will have 30 days from the date of assignment to complete the training.

Due to summer scheduling, IIPP training will be initially assigned to full-time CSE employees. Completion of the training will be valid for three years. CSE part-time and student employees will be assigned the training after the start of the academic year in the Fall.

You can find more information on CSE's IIPP and additional safety resources on the [CSE website](#). If you have questions regarding the IIPP Training, please contact CSE Human Resources at CSEHR@csuchico.edu. Thank you for your continued support in helping us keep the campus community and our employees safe.
