Guidelines to offer the Teaching Climate Change & Resilience on your Campus

This faculty learning community was developed by Dr. Mark Stemen, Professor of Geography and Planning at CSU, Chico.

Dr. Stemen’s goal, and that of his CSU partners, is to have the FLC packaged for anyone in California to use by Spring 2023. The first two iterations of this plan are:

- to pilot a first FLC (Spring 2022)
- to refine the FLC (Fall 2022) and then have a full curriculum ready to share by the end of Fall 2022.

For Spring 2022, we envision two options for CSU campuses:

**OPTION ONE**

*For campuses who want to plan an FLC on climate change and resilience in Spring 2022*

1. Chico State will share the template call for applications.
2. Chico State will share resources about the FLC curriculum (Dr. Stemen will coordinate this step with the local FLC leads).
3. Each individual campus will find a FLC lead.
4. Each individual campus will determine when/how the FLC meets.
5. Each individual campus will determine what the deliverables and expectations for the FLC will be.
6. Each individual campus will determine if compensation or other incentives are part of the FLC.
7. Each individual campus will manage campus attendance, curriculum delivery, and payment (if applicable).
8. Dr. Mark Stemen will meet with the other FLC leads throughout the Spring 2022 semester to discuss the progress of the FLC.

**OPTION TWO**

*For campuses who want to offer the FLC in the future (by Spring 2023)*

1. Chico State will share the template call for applications.
2. Chico State will share resources about the FLC curriculum.
3. Dr. Mark Stemen will work with interested faculty to develop a full FLC for Fall 2022 or Spring 2023.

Please contact Dr. Mark Stemen for more information (mstemen@csuchico.edu) and visit the FLC page.
